Get outlook calendar on android phone

There are hundreds of Android phones on the market today. Some are exclusive to specific providers, some are available around the world, but only a few are the head of their class. This week we want to know which Android phones you think are best, not just because they round up a list of feature checklists or high-end hardware. But since you think they offer a great overall experience, Here's a look at the top five Android phones based on your nomination. Earlier in the week, we asked you which Android phone you thought was the best. There are many websites that are willing to tell you which phone is best based on the built-in camera chip that stores data or a pre-installed Version of Android, but they don't always add a great user experience. We ask you which phone, past or present, which you think is best and more than 300 nominations later, we're back focusing on the top five. Polls closed and the votes are counted! To find out which of the 5 contestants below have won the top prize based on your votes, go straight to our five-nest follow-up post to find out and discuss the winner! Looking for a good Android phone? Of course, we know that the market is completely different within the Read MoreSamsung Galaxy NoteOften, called phablet, because of its integrated stylus and the large Super AMOLED display, the 5.3 Samsung Galaxy Note (AT&T, \$299 w/contract) is large, but many praise it for mixing the phone's portability with some essential tablets, such as real estate. The rear camera and 8MP front camera and 2MP and 1.4GHz dual core processor don't hurt the subject as well, and while it's not the right size for everyone, everyone has one loves it and the other. Looking forward to launching in another provider. Also, although the Galaxy Note is shipped with pre-installed Android 2.3 Gingerbread, there are plenty of ROMs to bring to the Android 4.0 ice cream sandwich or simply replace all Samsung's TouchWiz interface. The HTC One X/The HTC One series is HTC's latest attempt to establish itself, not what the company really wants - most people using HTC devices love them, and the HTC One X and One S are no exception to the One X rule (AT&T, The One X). The \$199 w/contract) is HTC's new flagship phone, a 4.7-inch sports screen, NVidia Tegra 3 (universal) or Qualcomm Snapdragon (US/Canada) dual-core processor, Android 4.0 ice cream sandwich (with HTC's Sense UI above), Beats Audio On the other hand, the HTC One S (T-Mobile, \$189 w/contract) is a slightly smaller screen, 4.3 dual core processor, 1.5Ghz dual core, 8MP rear camera and VGA front camera, Beats sound and ice cream sandwich. Until now it has resulted samsung galaxy S/S II series Samsung Galaxy S devices are some of the most popular smartphones in the world, and although Samsung and Apple are embroiled in a patent lawsuit that approaches similar Galaxy S with the iPhone (and vice versa), that hasn't stopped the Galaxy S and Galaxy S II from selling millions of units worldwide. The Galaxy S is one of the first dual-core Android smartphones and one of Samsung's newest smartphones (at the time), the Super AMOLED display offers bright and even crisp colors in glare. And while it comes with Android 2.3, most carriers have released updates slowly to bring the device to Android 4.0, pricing varies depending on the carrier and the variant you pick up, but one thing is for sure: when launching, most People's Galaxy S II Android smartphones, if not the best smartphones available on the market, make it fly over the upcoming Samsung Galaxy S III. The Droid Series by Motorola By Motorola (Motorola Milestone, Internationally) is one of the oldest Android phones on the market to bring Android to the masses, and of course the first Android phone available on Verizon Wireless at the time, it was a hard line to group droid series together, but it's worth noting that many droid line nominees mention specific slider models, not droid razor, Razzr Maxx or Bionic (although they all get strong nominations as well). The Motorola Droid 4 (VZW, \$199 w/promise) is a current iteration of the phone with a 4-inch qHD display, a 1.2GHz dual core processor, an 8MP rear and a 1.3MP front camera, and in particular a slide glow keyboard that allows the phone to use both in portrait and landscape modes without sacrificing the real estate screen. The Droid Line remains one of the few high-end Android devices with a physical keyboard, making it popular for both portability and to those who want a physical keyboard with an on-screen device. The Droid 4 Sports Android Gingerbread and Ride 4G Network of Verizon Wireless Samsung Galaxy NexusThe Samsung Galaxy Nexus (VZW, Sprint, Contract \$199/w, Unlock \$399) is the official Google Phone currently launched with an Android 4.0 ice cream sandwich and currently serves as its flagship Android device, sports a 4.6-inch AMOL Super Display, a double-core curved screen, 1.2GHz and back 5.2MP and 1.133. It's a pure Google experience, which means the phone is (mostly) free of bloatware and other apps pre-installed by carriers and manufacturers, and lacks Samsung's TouchWiz UI layer in favor of a clean ice cream sandwich. The phone also sports Google's NFC payment system, Google Wallet Camera has zero shutter lag, and is the first phone to launch with a pre-installed ice cream sandwich and remains one of the few devices you'll already get. If you want the real and purest Android experience possible, or want an Android phone that Google officially supports, here it is. Now it's time to vote for all the champions. It was difficult this week to run down the top five considering that there are three Samsung devices in the works, but some have been more nominated than other competitors combined, so we can't ignore the fact that many people have strong opinions about these particular models. Is there anything to say about the nominees we've missed? Does your favorite phone get enough nominations to include? Keep in mind that the top five are based on your most popular nominations from the call to thread contestants from earlier in the week. Share your thoughts in the comments below Hive Five based on reader nominations, as well as most Hive Five posts, if your favorites are left, not because we hate it - it's because it's not the nomination needed to call the post contestants to the top five. We understand it's a little popularity contest, but if you have favorites, we'd like to hear about it. Have any suggestions for Hive Five? Email us at the +hivefive@lifehacker.com!Photos by Pittas Sprinkling Microsoft Outlook is a calendar that is part of a Microsoft Office package. If the calendar doesn't open, it might mean that the file is missing or corrupted. To repair the calendar, you need to reset folders and files. Close all Outlook programs, including e-mail accounts. If you're not sure if everything is turned off properly or not, you can use the following Open the Windows menu by clicking the menu button in the lower-left corner of the screen. Select the Run, write outlook/cleanreminders option in the area provided under Run option. Click OK to complete the file cleanup. Repeat the Run selection, but type outlook/resetfolders instead of resetting all folders in Outlook, so all files are set to standard or factory settings. Click OK to start the reset. Turn off your computer when both processes are complete. Open Turn on the computer again and open the Outlook calendar. Day
